

Industry-University Cooperative Research

Hytem has donated JY100,000,000 (USD670,000) to Tokyo National University, the top level university in Japan, by which Hytem will get the continual scientific and research support in the long term basis under the certain amount, targeting one step advanced EFA(Egg Farm Automation).

Since Hytem started in 1972, 54 years ago, Hytem has been concentrated in providing the innovative Egg Farm equipment such as New Tunnel Ventilation reducing summer heat problem & realizing warmer winter environment, and Eco Breeze, the energy saved manure pre-drying system.

In proceeding those technologies, Hytem positively proceeded the industry-University Cooperative Research with Gifu National University. Numbers of Research have reached to 28 since 2006.

By the start of Cooperative Research with Tokyo University, the synergetic effect with Cooperative Research with Gifu National University can be expected.

The starting projects are "Soilborn", dried & disinfected manure pellet as high quality organic fertilizer with Faculty of Agriculture, and Dead birds finding system with Faculty of Engineering.
